Quick Summary

Dedicated and results-driven analytics professional with experience in the Education, construction, and Retail industries, seeking a role to leverage analytical skills and contribute to the organization's growth and success by developing pipelines and insightful reporting.

Skillset

Technical Skills: Data Engineering (5 years of project experience), Python, PySpark, SQL, ETL/ELT, Dimensional Data Modeling, dbt, Data Quality, Microsoft Fabric, Azure Data Factory, Databricks, Apache Spark, Apache Airflow, Medallion Architecture, Power BI, Tableau, Google BigQuery (basic familiarity), Git, Azure DevOps, CI/CD, Docker, Agile Methodology.

Professional Experience

May'25 - Aug'26

Remote • Melbourne, Australia

Smart Solutions Technologies (SST) Visit Site

Data Engineer

- Developed and maintained ETL/ELT pipelines using Python and SQL to integrate data from multiple sources and prepare reliable datasets for reporting and analysis.
- Implemented data cleaning, transformation, and validation processes to improve data quality, consistency, and reliability across data workflows.
- Conducted SQL-based data analysis and prepared reports to identify operational trends, monitor performance metrics, and support data-driven business decisions.

Nov'23 - Mar'25

Hybrid • Joensuu, Finland

University of Eastern Finland Visit Site

Research Fellow Assistant - Data Engineer

- Developed Python, PySpark, and SQL data pipelines processing 5M+ student records, reducing manual processing time by 60%.
- Designed dimensional data models and Power BI dashboards, improving query performance by 45% and reducing reporting time from hours to minutes.
- Built automated data-quality checks and anomaly detection scripts, reducing investigation time by 40% and improving pipeline reliability.

Sep'21 — Aug'23

Hybrid • Dublin, Ireland

GagaMuller Visit Profile ↗

Data Engineer

- Built an end-to-end ETL pipeline from Azure DevOps APIs using Python and dbt, reducing backlog analysis time by 75%.
- Delivered real-time Power BI dashboards for engineering leads and senior managers. Improved sprint planning accuracy by 25% across multiple Scrum teams.
- Engineered an end-to-end analytics solution for WayLoader using Microsoft Fabric (Data Factory, Lakehouse, Pipelines), improving data freshness by 70%, cutting manual reporting time by 50%, and boosting product sales visibility.
- Designed a real-time analytics platform on Power BI, giving stakeholders live insights into project risks, resources, and procurement, leading to a 25% faster delivery and 30% better resource utilization for construction project.

Academic Profile

2023 — 2025

Masters in Computer Science

On-site • Joensuu, Finland

University of Eastern Finland

→ Full-time On-site Masters Degree

Research Thesis: Hybrid Deep Learning Model for Diabetes Early Detection
Main Courses: Machine Learning, Deep Learning, Applied Image Processing, Natural Language Processing

2017 — 2021

On-site • Islamabad, Pakistan

Bachelor's Degree in Computer Science

Comsats University Islamabad

→ Full-time On-site Bachelor's Degree

FYP Project: Developed a POS System with dynamic functionalities using PHP, SQL Database and carried out testing among local retailers.
Main Courses: Data Warehousing & Data Mining, Artificial Intelligence, Database Systems, Design Principles, Web & Intranet
